# Empathy Map

Treavue — Personalized Travel Itinerary Planner

Project documentation prepared for portfolio and repository use

## Says

“I want a trip plan that fits my budget and interests without spending hours organizing everything.”

## Thinks

“Are these activities practical for my dates? How much might the trip cost? Can I change the plan later?”

## Does

- Browses destinations and attractions.
- Compares options and estimates costs.
- Builds a schedule in notes or spreadsheets.
- Revises plans when time, budget, or needs change.

## Feels

Excited about the trip, but potentially overwhelmed by scattered information and uncertainty.

## Needs and opportunities

- A clear planning workflow.
- Preferences captured in one place.
- A readable daily schedule.
- Editable saved plans.
- Honest labels for estimates and unsupported live data.

## Design implication

Prioritize clarity, transparent limitations, editable itineraries, and a low-friction interface over unsupported claims of real-time intelligence.
