Customer Journey Map

Treavue — Personalized Travel Itinerary Planner

Project documentation prepared for portfolio and repository use

1. Discover

User opens Treavue and browses the available destination information. Need: clear destination overview. Opportunity: concise destination cards and details.

2. Define trip

User selects destination, dates, travelers, budget, interests, pace, transport, and additional needs. Need: understandable form. Opportunity: relevant preference fields and validation.

3. Generate

User requests an itinerary and reviews the generated days and activities. Need: relevant and practical plan. Opportunity: rank available schedules using preferences and show caveats.

4. Review budget

User checks activity cost information and overall budget guidance where available. Need: avoid surprise expenses. Opportunity: itemized estimates and explicit estimate labels.

5. Save and revise

User saves, renames, edits, duplicates, or removes a trip using available controls. Need: retain work. Opportunity: persistent storage and visible failure feedback.

6. Prepare to travel

User checks real-world routes, opening hours, prices, dietary suitability, and accessibility. Need: trustworthy final details. Opportunity: clearly distinguish app suggestions from independently verified travel facts.
