# Project Planning

Treavue — Personalized Travel Itinerary Planner

Project documentation prepared for portfolio and repository use

## Goal

Deliver a usable, maintainable personalized travel planner with itinerary generation and trip persistence.

## Workstreams

| Workstream | Deliverable | Status |
|---|---|---|
| **UI and trip workflow** | **React pages and preference form** | **Implemented in current project** |
| **API** | **FastAPI routes and schemas** | **Implemented in current project** |
| **Persistence** | **Supabase trips CRUD** | **Integrated; verify current environment** |
| **Personalization** | **Preference-aware schedule ranking** | **Implemented using available data** |
| **Quality** | **Backend tests, typecheck, build** | **Run before release** |
| **Security** | **Authentication and ownership** | **Requires end-to-end completion/verification** |

## Milestones

- M1: Review requirements and existing code.
- M2: Implement core trip generation and UI.
- M3: Integrate persistent trip CRUD.
- M4: Improve preference ranking and cost/route transparency.
- M5: Verify tests, usability, and failure states.
- M6: Complete authentication, ownership, RLS, and deployment review.

## Risks and mitigations

- Missing/limited destination data — communicate limitations.
- Cloud unavailable — retain local data and show warning.
- Unverified cost/route data — label estimates and require user verification.
- Privileged key or weak ownership — block public release until security is verified.
