Functional Features Included

Treavue — Personalized Travel Itinerary Planner

Project documentation prepared for portfolio and repository use

Feature inventory

#	Feature	Description
1	Destination browsing	Explore the destination data currently available.
2	Trip preference form	Capture trip dates, travelers, budget, interests, pace, and needs.
3	Itinerary generation	Generate a structured plan using existing activity schedules.
4	Pace-aware planning	Adjust daily activity count for slower travel pace.
5	Preference-aware ranking	Rank available schedules using supported preference inputs.
6	Activity details	Show title, timing, location, duration, and available cost fields.
7	Budget guidance	Use available cost data as estimates, not guaranteed prices.
8	Trip persistence	Create/list/read/update/delete trip records through API and Supabase.
9	Local fallback	Retain browser data and surface sync issues when cloud storage fails.
10	Trip editing	Support changes through the existing trip management UI.
11	Travel chat	Existing conversational interface, where configured.
12	Testing/build	Backend tests, TypeScript typecheck, and production build workflows.

Feature verification

Only mark a feature as fully working after testing it in the current environment. Authentication and per-user ownership should be marked pending until verified end-to-end.
