Team Involvement in Demonstration

Treavue — Personalized Travel Itinerary Planner

Project documentation prepared for portfolio and repository use

Presenter role

Introduce the problem, explain the user journey, operate the website, and summarize results.

Frontend explanation

Explain the preference form, itinerary display, trip-management UI, and error/fallback messages.

Backend explanation

Explain how FastAPI handles itinerary requests and trip CRUD endpoints.

Database explanation

Explain that Supabase stores trip metadata and the full trip object; do not show service secrets.

Testing explanation

Report actual test/build results for the submitted commit, including any limitations.

If working solo

One presenter can cover all sections. Do not invent team members or assign contributions that did not occur.

Q&A preparation

- How are preferences used?
- Where are trips stored?
- What happens when cloud storage fails?
- Are costs live prices?
- Is authentication and ownership secure yet?
- What are the next improvements?
